

devNext Command returning devNext v2 Version Output

Last edited by [RKATTIMA](#) 1 year ago

devNext v2 to v3 Migration

- If you are the existing devNext v2.3.* User, executing the `devNext` command will return the devNext version 2 output.

```

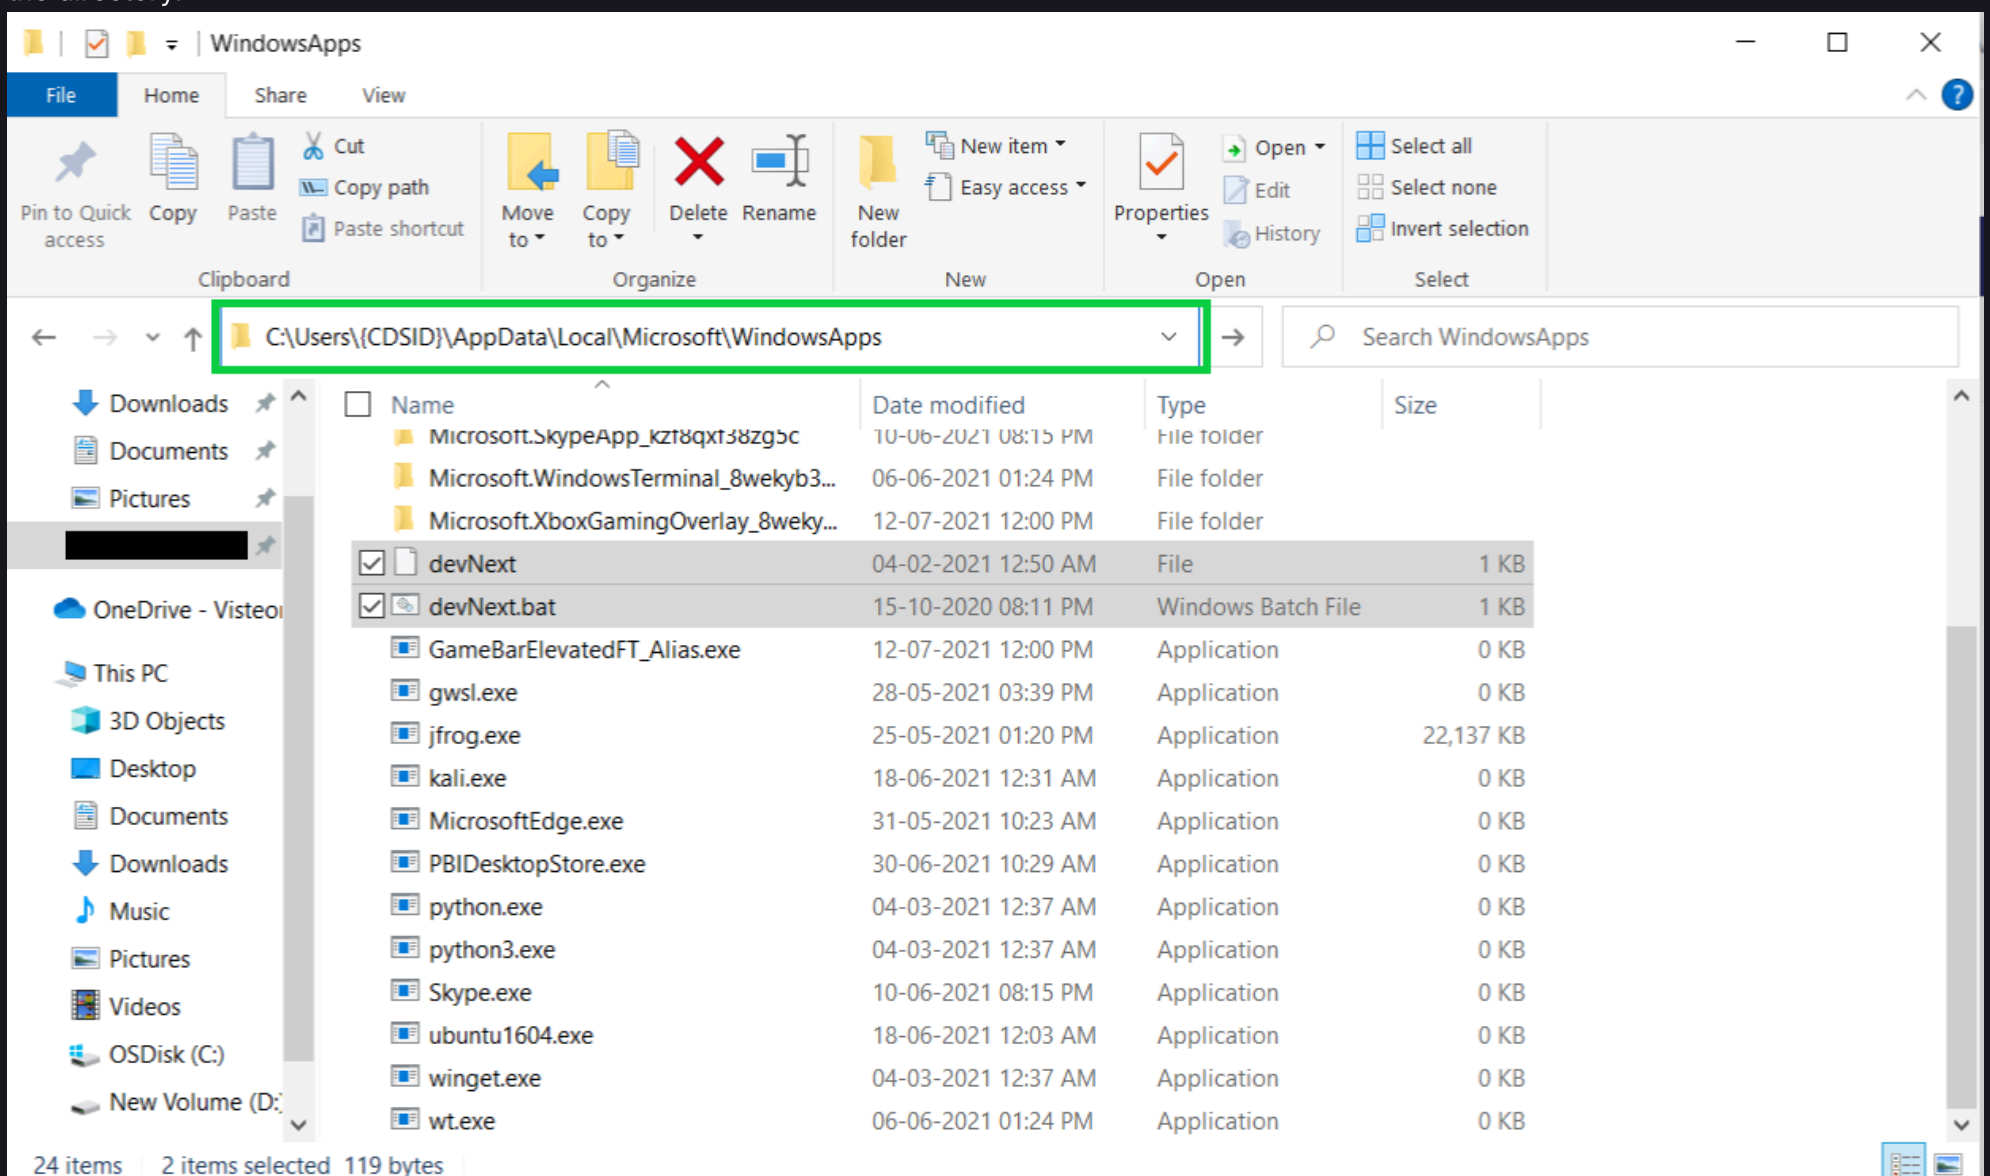

PMXD46GN0X2:~/s28repo$ devNext

devnext.support@visteon.com

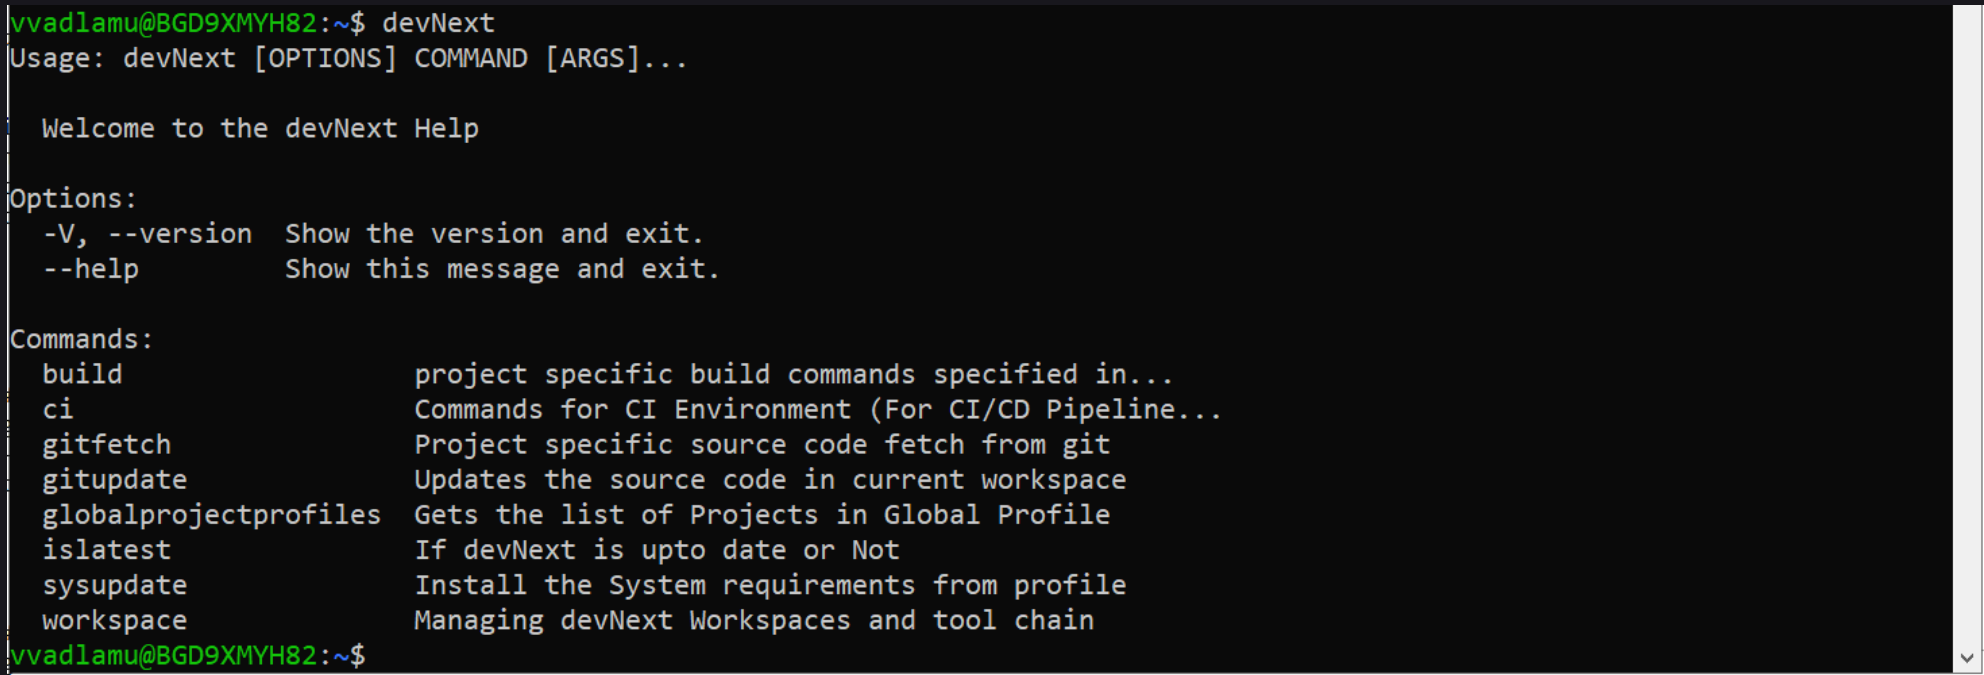

usage: devNext.py [--version] [--help] [--faq] [--il] [--update UPDATE]
                [--buildimage BUILDIMAGE] [--pushimage]
                [--imtagetag IMAGETAG] [--envsetup] [--envdetails]
                [--forcesync] [--reposync] [--setup] [--norestart]
                [--location LOCATION] [--imageversion IMAGEVERSION]
                [--repoint REPOINT] [--repointdocker] [--vbuild VBUILD]
                [--build BUILD] [--covsetup] [--covfiles COVFILES]
                [--covinc COVINC] [--vscode] [--log LOG] [--noanalytics]
                [--ghs-lmport GHS_LMPORT] [--installgit] [--eclipse]
  
```

- To Use devNext v3 instead of v2, Please follow the below steps.

- Go to the Windows Apps Directory - `%USERPROFILE%\AppData\Local\Microsoft\WindowsApps`. You can able to see devNext and devNext.bat files in the directory.

3. After successful rename we can able to see that devNext v2 will run with the command `devNextv2` and `devNext` will default point to `devNext v3`
