

CONAN_USER_HOME for Developers

Last edited by **VREDDY10** 2 years ago

- Conan manages all the required third party softwares such as GHS, QNX Compilers or any other software required to build our software.
- Conan User home is the place where all the Conan Saves Configurations and Packages gets downloaded.
- by Default CONAN_USER_HOME is set to the User Home(\$HOME) i.e., /home/<username>.
- If your home directory has less space to keep all third party software packages - you can change the conan storage location to different place by setting CONAN_USER_HOME environment variable.
- To set the Conan-User-Home run following Command:

```
echo 'export CONAN_USER_HOME=<your-custom-new-conan-home-path>' >> ${HOME}/.bashrc
source ${HOME}/.bashrc
```

Example:

Here we are using `/data/conan` as the `<your-custom-new-conan-home-path>`

- You can use the in-app command `devNext --help` or `devNext <command> --help` for more options/help
